CleverCar

**BRINGING THE INBOUND
LOGISTICS OF CARS
TO A NEW LEVEL**

CleverCar

CleverCar is a mechanic's best friend.

Fastening supplies travel to the site in the car's small parts bins and are easily accessible on any site.

CleverCar is a system based on CleverBin small parts bins and it automatically and proactively orders the replacement products directly to the maintenance or installation car.

Once the set ordering point has been reached, the bin places an order for a replacement batch automatically and proactively.

The mechanic can focus on what is essential and the system ensures that there are enough supplies.

CLEVERCAR BENEFITS

HOW DOES IT WORK?

The router connected to the car's electricity (12 V) and the sensors in the small parts bins interact automatically and proactively concerning the amount of products.

Once the defined ordering point has been reached, the system forms an order that will be transmitted to the supplier through the mobile network. This leads to a significant decrease in ordering process steps and human error. The customer can focus on working efficiently.

The products are delivered to the correct address for adding to the car's small parts bins.

The CleverCar system is suitable for the logistical management of different kinds of parts.

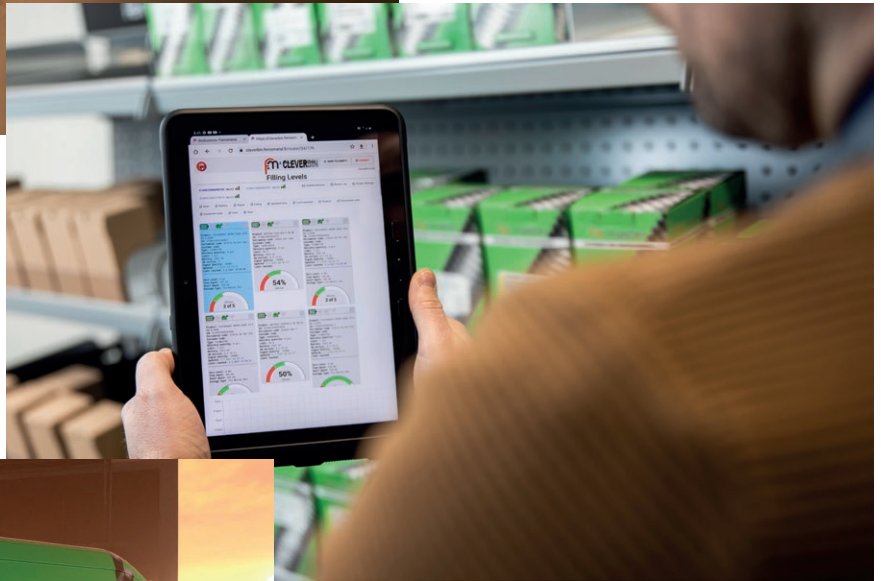

The system can also be used to manage third-party orders, in which case the name Tribase is used.

In the Tribase CleverCar system, Ferrometal supplies the system and invoices the customer for the system, its management and transaction per sent order.

When the ordering point has been passed, the Tribase system sends an automatic order by email to the selected addresses.

CleverCar brings the inbound logistics of a car to a completely new level!

CLEVERCAR MONITORING
