PROACTIVE ORDER-PLACING CONTAINER FOR FASTENING ACCESSORIES

CleverContainer

The Clever sensors installed into a container monitor the number of fasteners and other small accessories. The sensor monitors the ordering point preset for the product. When the defined ordering point has been reached, the system automatically forms a purchase order, well before the product is completely gone.

The Clever system sends the purchase order to the supplier.

The ordered replacements are delivered directly to the site, even as early as the next morning.

CleverContainer provides sites with time management and efficiency!

CLEVERCONTAINER BENEFITS

Quick & predictive

Transparent process

More precise production

Lower storage values

Efficient operations

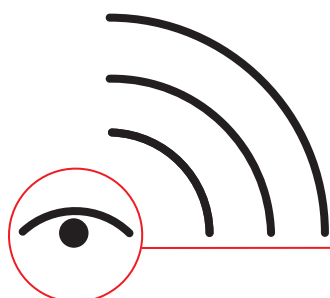

Fewer mistakes

CLEVERCONTAINER

CleverContainer is proactive and places an order for replacement goods well before the products run out.

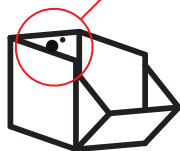

CleverContainer ensures that the site operates uninterrupted, without any disruptions caused by the lack of fastening accessories or small accessories.

All CleverContainer applications have a smart sensor that monitors the number of goods. Once the ordering point has been reached, the system places an order automatically.
