**CONTROL THE SHELF SPACE – SELL MORE**

## CleverStore

CleverStore takes care of replacement orders and lets store personnel focus on sales.

The Clever sensors installed onto the store shelves monitor the number of fasteners and other supplies. The system monitors the storage levels preset for the products. When an item reaches the ordering point, the system automatically places an order, well before the store runs out of the product.

The Clever system sends the information about the need or the order to the selected address.

CleverStore works in small parts bins and on shelves, pallets, floors, etc. The service system can be integrated with the current store presentation and the Fix master system, for example.

# CLEVERSTORE BENEFITS

**Quick & predictive**

**Efficient operations**

**Extremely efficient use  
of shelving space**

**Lower storage values,  
better stock rotation**

**Accurate data to support  
decisions**

**Satisfied, stable customers**

## CLEVERSTORE

The CleverStore system is proactive and forms a replacement order based on consumption, ensuring that the in-store spot and shelves do not remain empty.

Satisfied customers are sure to return, again and again.

CleverStore ensures that the goods to be sold are available in all store displays.

All CleverStore applications have a smart sensor that monitors the number of goods. Once the ordering point for the item has been reached, the system places an automatic order.
